

MD:Imp 08/26/03 P0540

PATENT

In the Claims:

1. (Currently amended) An identification document comprising:
first printed matter rendered at a first location on said document and at a first scale
enabling said first printed matter to be resolved by a viewing person without magnification, said
first printed matter conveying identifying information;
second printed matter comprising information that communicates the same identifying
information as said first printed matter, the second printed matter rendered at a second
microscale and at a second confidential location on said document and in a second color, said
second microscale being significantly smaller than said first scale, said second confidential
location being spaced from said first location and being selected and arranged to be a location
that is not generally known, and said second color being selected to effect minimal contrast
between said second printed matter in said second location and its immediate background;
wherein the combination of said minimal contrast, said second confidential location, and
said second microscale is constructed and arranged to substantially hide the existence and
location of said second printed matter from the naked eye and prevent said second printed matter
from being substantially detected or resolved unless the viewing party knows the second
confidential location and views said second printed matter is viewed using a magnification lens.
2. Cancelled
3. (Currently amended) The identification document of Claim 1 wherein said second printed
matter consists of text rendered in a single color, said color being selected to effect minimal
contrast between said second printed matter in said second confidential location and its
immediate background.
4. (Currently amended) The identification document of Claim 1 wherein said second printed
matter consists of relatively dark toned text printed on a background color which is lighter toned
than said text, said light tone and said darker tone constituting a tone difference, said tone

PATENT

difference being selected to effect minimal contrast between said second printed matter in said second confidential location and its immediate background.

5. (Currently amended) The identification document of Claim 1 wherein said second printed matter consists of relatively light toned text printed on a background color which is darker toned than said text, said light tone and said darker tone constituting a tone difference, said tone being selected to effect minimal contrast between said second printed matter in said second confidential location and its immediate background.

6. (Previously entered) The identification document of claim 1 wherein said identification document identifies a particular person and said identifying information comprises at least one of information specific to the identified person and information specific to the identification card.

7. Cancelled

8. (Original) The identification document of claim 1 wherein said first and second printed matter comprise alphanumeric characters.

9. (Original) The identification document of claim 1 wherein said first and second printed matter comprises at least two digits of the year of birth of a person identified in the document.

10. (Original) The identification document of claim 1 wherein said second printed matter is a graphical reproduction of said first printed matter.

11. (Currently amended) A system of tamper resistant identification documents, the system comprising:

a plurality of identification documents, each of said identification documents displaying information specific to a particular person and comprising first printed matter rendered at a first location on said documents at a first scale enabling said first printed matter to be perceived without magnification, said first printed matter of each card comprising first information specific

PATENT

to at least one of the plurality of identification documents, the identification document itself, and the particular person identified in each card, and said identification document further comprising second printed matter conveying the same information as said first information, said second printed matter a second micro scale and rendered at a second confidential location on said documents and in a second color, said second micro scale being significantly smaller than said first scale, said second location being spaced from said first location, and said second color being selected to effect minimal contrast between said second printed matter in said second location and its immediate background, said minimal contrast and said second confidential location being constructed and arranged to hide said second printed matter from the naked eye; and

means for hiding said second printed matter from the naked eye, the combination of said second microscale and said means for hiding rendering said second printed matter not ascertainable to the naked eye unless said second confidential location is known and second printed matter is viewed using a magnification lens;

12. Cancelled

13. (Previously entered) The identification document of Claim 11 wherein said means for hiding said second printed matter comprises printing said second printed matter within a graphical image having sufficient complexity to camouflage said second printed matter from the naked eye.

14. (Currently amended) The system of Claim 11 wherein said means for hiding said second printed matter comprises printing said second printed matter using relatively dark toned text printed on a background color which is lighter toned than said text, said light tone and said darker tone constituting a tone difference, said tone difference being selected to effect minimal contrast between said second printed matter in said second confidential location and its immediate background.

15. (Currently amended) The system of Claim 11 wherein said means for hiding said second printed matter comprises printing said second printed matter using relatively light toned text

MD:Imp 08/26/03 P0540

PATENT

printed on a background color which is darker toned than said text, said light tone and said darker tone constituting a tone difference, said tone difference being selected to effect minimal contrast between said second printed matter in said second confidential location and its immediate background.

16. (Original) The system of claim 11 wherein the first and second printed matter is unique to each document of said plurality.

17. Cancelled

18. (Previously entered) The identification document of claim 11 wherein said first printed matter communicates said second printed matter in an encrypted form.

19. (Previously entered) The identification document of claim 11 wherein said first and second printed matter comprise identifying information that is determined most likely to be altered.

20. (Previously entered) The identification document of claim 11 wherein said second printed matter comprises a graphical reproduction of said first printed matter.

21. (Currently amended) A method of printing-a document containing identifying information for a particular person comprising:

providing a base card;

printing first information which is specific to the particular person identified on said base card at a first location and at a first scale enabling said printed information to be perceived without magnification; and

printing second information at a second micro scale and at a predetermined secret second location on said document, and in a second color, said second information comprising information capable of communicating the same identifying information as said first information, said second micro scale being significantly smaller than said first scale, said second location

MD:Imp 08/26/03 P0540

PATENT

being spaced from said first location, and said second color being selected to effect minimal contrast between said second information in said second location and its immediate background, the combination of said predetermined secret second location, minimal contrast and said second microscale substantially hiding said second information from the naked eye and preventing said second information from being clearly perceived unless said the second information is viewed using a magnifying lens by a party with knowledge of the predetermined secret second location.

22. Cancelled

23. (Currently amended) The method of Claim 21 wherein said step of printing said second information at said predetermined secret second location consists of printing said second information in a single color, said color being selected to effect minimal contrast between said second information - in said second location and its immediate background.

24. (Currently amended) the method of claim 21 wherein said step of printing said second information at said second predetermined secret location consists of printing said second information in a relatively dark toned color on a lighter toned background, said light tone and said darker tone constituting a tone difference, said tone difference being selected to effect minimal contrast between said second information in said second predetermined secret location and its immediate background.

25. (Currently amended) The method of claim 21 wherein said step of printing said second information at said second predetermined secret location consists of printing said second information in a relatively light toned color on a darker toned background, said light tone and said darker tone constituting a tone difference, said tone difference being selected to effect minimal contrast between said second information in said second predetermined secret location and its immediate background.
